

DAVI FERREIRA FREITAS

Software Developer | Generative AI, AI Agents & Process Automation

Várzea Paulista, SP, Brazil • +55 (11) 93378-2810 • davizinho.f.freitas@gmail.com • LinkedIn: Davi Freitas •
github.com/davizinhoow

SUMMARY

Software developer focused on applied AI and automation, building production systems at UNIANCHIETA for over a year. Hands-on experience orchestrating multiple AI agents, integrating APIs (Meta Ads, Google Ads and banking institutions), Machine Learning and workflow automation with n8n. I start from the business process: I identify the bottleneck, design the solution and ship tools that cut operational cost and time, such as the automation that reduced landing page production from **~1 day to under 20 minutes**.

PROFESSIONAL EXPERIENCE

UNIANCHIETA — Software Development Intern

Feb 2025 – Present

Internal systems, automation and AI-powered solutions • 30 hours/week

- Build AI-powered systems and automations using generative AI and agents, from mapping internal processes to production delivery.
- Design and integrate APIs with external services (ad platforms, CRM and banking APIs), connecting previously isolated systems.
- Automate operational workflows with n8n, integrating databases, cloud storage (Amazon S3) and internal servers.
- Develop full-stack applications with Python, React, Next.js, Node.js and Nest.js on SQL Server, MySQL and PostgreSQL.
- Lead and coordinate other interns on development projects, while maintaining and evolving existing systems.

FEATURED PROJECTS

Automated Landing Page Generation with Multiple AI Agents

Internal

React • n8n • AI Agents • Amazon S3 • SQL Server

- Pipeline that turns a briefing into a published landing page following institutional templates, with specialized AI agents at each stage.
- Cut production time from **~1 working day to under 20 minutes**, with automated deployment to company servers.

Campaign Audit & Insights System

In production

Python • React • Nest.js • MySQL • Generative AI

- Centralizes paid traffic data via Meta Ads and Google Ads APIs and cross-references it with CRM data to measure real campaign results.
- Automatically detects inconsistencies and uses AI to generate insights and recommendations from historical KPIs.

AI-Powered Bank Reconciliation

Internal

Banking APIs • Generative AI • Automation • Databases

- Automates reconciliation of financial transactions by integrating with banking institution APIs.
- Uses AI to classify and organize inflows and outflows, reducing manual work for the finance team.

Student Dropout Prediction with Machine Learning

Final stage

Python • Random Forest • Jupyter • SQL Server

- Random Forest model that identifies students at risk of dropping out, enabling early intervention by the institution.
- Responsible for data extraction and preparation, modeling, and automated insertion of predictions into the database (team of 3).

TECHNICAL SKILLS

AI & Automation: Generative AI, AI Agents, multi-agent orchestration, n8n, Machine Learning (Random Forest), LLM integration into systems

Languages: Python, JavaScript, Java, C#, PHP, SQL

Frameworks: React, Next.js, Node.js, Nest.js, REST API development and integration

Data: SQL Server, MySQL, PostgreSQL, Jupyter Notebook, Power BI

Infra & DevOps: Git/GitHub, Docker, Linux, VPS, self-hosted environments, Amazon S3

AI Dev Tools: Claude Code, Cursor, GitHub Copilot, Codex, Google AI Studio, Lovable

EDUCATION

IT Technical Program integrated with High School — Escolas Padre Anchieta

2024 – Dec 2026

OOP, Databases, APIs, Web and Mobile Development, Networking, Operating Systems

Additional courses: Rocketseat (Generative AI, n8n Automation, AI for Data Analysis, Power BI, HTML/CSS/JavaScript) • Asimov Academy (Python, Programming Logic)

Languages: Portuguese (native), English (basic to intermediate, technical reading and writing) • **Hackathon** participant during technical program
